

BOMBS AWAY!

Reyshiel Anne Doromal and Carrie Mae Lee

Storyline:

On one unsuspecting day in Zen Garden, an ancient, neon-colored fungus caught the eye of two Biology students. As they observed the organism, they slowly noticed that it was mutating from being part of Ateneo's local fauna into a restless army of Slimes. These gelatinous creatures have overrun Zen Garden, and getting in physical contact with one of these slimy creatures results in a painful sting you would not want to experience.

Tasked by Father Bobby to get rid of these slimes, you and your rival warrior must kill the most amount of slimes while staying alive, as the person with the most slimes will get a special reward from our president. With the clock ticking and the mutation spreading, there is no time to lose. You have exactly two minutes before the Slimes fully bond with the garden's roots, making them impossible to remove. Ensure that your rival does not claim all the glory by dropping your bombs away!

Description:

Akin to the 1980's game *Bomberman*, Bombs Away is a two-player PvP game wherein players have a limited number of lives and will lose one if caught in a blast. The players destroy the slimes to accumulate points within a 2-minute time limit, and whoever is alive and gets the most points at the end wins. With their movement limited by stone walls, the players must navigate the board to dodge incoming slimes and exploding bombs. This family-friendly game can be played by a wide range of age groups and is definitely an exciting way to bond with friends and test your quick-thinking skills. It's a battle of wits, timing, and spatial awareness where one wrong turn could lead to a sticky situation!

Game Mechanics:

1. Objective of the Game

The main goal of the game is to rack up as many points as possible by clearing out slimes while making sure you don't lose all your lives in the process. You have a 2-minute time limit to hunt down slimes and use your bombs to try and knock out your rival. However, staying alive is just as important as scoring; if you lose all your lives, your opponent wins the match automatically. The game officially ends the moment the timer hits zero or one of the players is eliminated.

2. Game Setup

Each player starts off the match with 5 lives and a score of zero. The board and its stone walls are fixed, serving as the battleground for the two players. Throughout the garden, slimes spawn in set positions and follow a repeating movement. You'll encounter two specific types: horizontal slimes that slide left and right, and vertical slimes that move up and down along the garden paths.

3. *Scoring Points*

You earn points every time one of your bombs catches a slime in its blast. To keep the game fair and strategic, you can only drop a bomb once every 5 seconds, and each one takes exactly 5 seconds to detonate after being placed. Keep in mind that while you can use your bombs to damage your opponent, doing so won't add any points to your score—only clearing slimes will help you win.

4. *Taking Damage*

Taking damage occurs whenever you collide with a moving slime or get caught within the blast radius of an exploding bomb. In either case, you will immediately lose one life, so you'll need to time your movements carefully to stay in the game.

Instructions:

1. Moving The Player

To maneuver your character through the paths of Zen Garden, simply use the arrow keys on your keyboard. Pressing the up, down, left, or right arrows will move your avatar in the corresponding direction across the board.

2. Dropping Bombs

To clear out the Slime infestation, press the spacebar to drop a bomb at your current location. Please note that the game permits you to drop a bomb only once every 5 seconds to prevent spamming and ensure tactical play. Additionally, each bomb is set on a timer and will detonate exactly 5 seconds after it has been placed.

3. Quitting the Game

If the mission becomes too perilous or you need to end your session early, you can stop the game at any time. Simply click the red X button located in the upper right corner of your window to exit and return to your desktop.
